Exam : **2V0-72.22**

Title : Professional Develop
VMware Spring

Version : DEMO

1.Which two statements are true regarding Spring Boot Testing? (Choose two.)

- A. `@TestApplicationContext` is used to define additional beans or customizations for a test.
- B. Test methods in a `@SpringBootTest` class are transactional by default.
- C. `@SpringBootTest` is typically used for integration testing.
- D. Test methods annotated with `@SpringBootTest` will recreate the `ApplicationContext`.
- E. `@SpringBootTest` without any configuration classes expects there is only one class annotated with `@SpringBootConfiguration` in the application.

Answer: C,D

2.Which two use cases can be addressed by the method level security annotation `@PreAuthorize`? (Choose two.)

- A. Allow access to a method based on user identity.
- B. Allow access to a method based on the returned object.
- C. Allow access to a method based on HTTP method.
- D. Allow access to a method based on request URL.
- E. Allow access to a method based on roles.

Answer: C,E

Explanation:

Reference: <https://docs.spring.io/spring-security/site/docs/5.2.11.RELEASE/reference/html/authorization.html>

3.Which two statements are true regarding a Spring Boot-based Spring MVC application? (Choose two.)

- A. The default embedded servlet container can be replaced with Undertow.
- B. Jetty is the default servlet container.
- C. Spring Boot starts up an embedded servlet container by default.
- D. The default port of the embedded servlet container is 8088.
- E. Spring MVC starts up an in-memory database by default.

Answer: B,C

Explanation:

4.What are the two reasons Spring be used to build a Java application? (Choose two.)

- A. Spring automates a Java application build.
- B. Spring provides a Dependency Injection container.
- C. Spring automates deployment of Java applications to all of the major cloud providers.
- D. Spring provides comprehensive Java IDE support.
- E. Spring provides abstractions over infrastructure such as persistence and messaging.

Answer: A,B

Explanation:

Reference: <https://spring.io/why-spring>

5.Which two statements are correct regarding the `@EnableAutoConfiguration` annotation? (Choose two.)

- A. It is a meta-annotation on the `@SpringBootApplication` composed annotation.
- B. It enables auto-configuration of the `ApplicationContext` by attempting to guess necessary beans.

- C. It is meta-annotation on the `@SpringBootApplication` composed annotation.
- D. It has the same effect regardless of the package of the class that is annotated with it.
- E. It ensures auto-configuration is applied before user-defined beans have been registered.

Answer: A,D

Explanation:

Reference: <https://docs.spring.io/spring-boot/docs/current/api/org/springframework/boot/autoconfigure/EnableAutoConfiguration.html>
