Exam : **300-640**

Title : Implementing Cisco Data Center AI Infrastructure (DCAI)

Version : DEMO

1.What describes inference traffic patterns in AI deployments?
A. optimizes data storage solutions for data lakes
B. simplifies complex neural network architectures
C. provides real-time decision making
D. eliminates the need for data preparation
Answer: C

2.Which function is provided through natural language processing?
A. compression of large configuration files for storage efficiency
B. automated conversion of spoken or written content into structured data
C. annotation of data transmission protocols for device authorization
D. filtration of duplicate entries from transaction records
Answer: B

3.Which result is provided through image recognition using AI?
A. anonymization of audit trails for compliance objectives
B. detection and labeling of visual elements from digital sources
C. scheduling of management tasks during maintenance periods
D. routing of multicast messages across network boundaries
Answer: B

4.What is the process involved in workload scheduling for AI environments?
A. assignment of tasks to compute elements for optimized performance
B. optimization of licensing structures for compliance
C. aggregation of device statistics for reporting
D. generation of backup images for restoration operations
Answer: A

5.How does RAG enhance the capabilities of LLMs?
A. by removing the data preparation and cleaning step
B. by removing inherent biases from LLM outputs
C. by providing access to proprietary data
D. by retaining the LLM by altering its core parameters
Answer: C
