Title : Adobe Commerce Developer Expert

Version : DEMO

1.Which of the following methods is used in Adobe Commerce to modify order data programmatically?
A. SalesOrderInterface::setStatus()
B. OrderManagementInterface::cancel()
C. OrderRepositoryInterface::save()
D. OrderHistoryRepository::update()
Answer: C

2.A client requests that their staging environment be configured to closely mimic their production environment.
What steps should a developer take to ensure this setup is accurate?
A. Use the Adobe Commerce Cloud admin panel to replicate all production settings in staging.
B. Deploy the same codebase and configurations to both environments, but disable certain production services like live payment gateways.
C. Manually copy all files and configurations from production to staging.
D. Modify the core settings in production to allow for easier replication.
Answer: B

3.A third-party vendor has developed a module to add blogging functionality to Adobe Commerce. The module creates a new database table to store the blog posts and includes an Admin grid to display the list of all posts.
Which action, at a minimum, would an Adobe Commerce developer take in order to add a search component to the grid that searches the contents of the post_content column?
A. Add a <filterSearch name="fulltext"/> and create a fulltext index for the post_content column in the database table.
B. Add a <filterSearch name="fulltext"/> node to the grid's <listingToolbar> node.
C. Add a <filterSearch name="fulltext"/> node to the <column name="post_content"> node.
D. Use a plugin to extend the existing admin grid functionality without modifying XML files.
Answer: B

4.How can a developer programmatically add a new customer attribute in Adobe Commerce?
A. Modify the customer EAV table directly via SQL.
B. Use a data patch to add the attribute using the EAV setup classes.
C. Add the attribute directly through the admin panel under stores configuration.
D. Update the eav_attribute table manually.
Answer: B

5.A client needs to implement product bundles that allow customers to select multiple items with specific discounts applied.
What product type should a developer use in Adobe Commerce to achieve this functionality?
A. Grouped Product
B. Bundle Product
C. Configurable Product
D. Virtual Product
Answer: B
