Exam : CKA

**Title : Certified Kubernetes
Administrator**

Version : DEMO

1.CORRECT TEXT

Perform the following tasks:

- ⇒ Add an init container to hungry-bear (which has been defined in spec file /opt/KUCC00108/pod-spec-KUCC00108.yaml)
- ⇒ The init container should create an empty file named/workdir/calm.txt
- ⇒ If /workdir/calm.txt is not detected, the pod should exit
- ⇒ Once the spec file has been updated with the init container definition, the pod should be created

Answer:

solution

The screenshot shows a web terminal interface with a dark background. At the top, there are two buttons: 'Readme' and 'Web Terminal'. To the right, the 'THE LINUX FOUNDATION' logo is displayed. The terminal content shows a series of commands and their outputs:

```
root@node-1:~# vim ds.yaml
iroot@node-1:~# k create -f ds.yaml
daemonset.apps/ds-kusc00201 created
root@node-1:~# k get ds
```

NAME	DESIRED	CURRENT	READY	UP-TO-DATE	AVAILABLE	NODE SELECTOR	AGE
ds-kusc00201	2	2	2	2	2	<none>	4s

```
root@node-1:~# vim /opt/KUCC00108/pod-spec-KUCC00108.yaml
```

```

2.CORRECT TEXT

Create a deployment spec file that will:

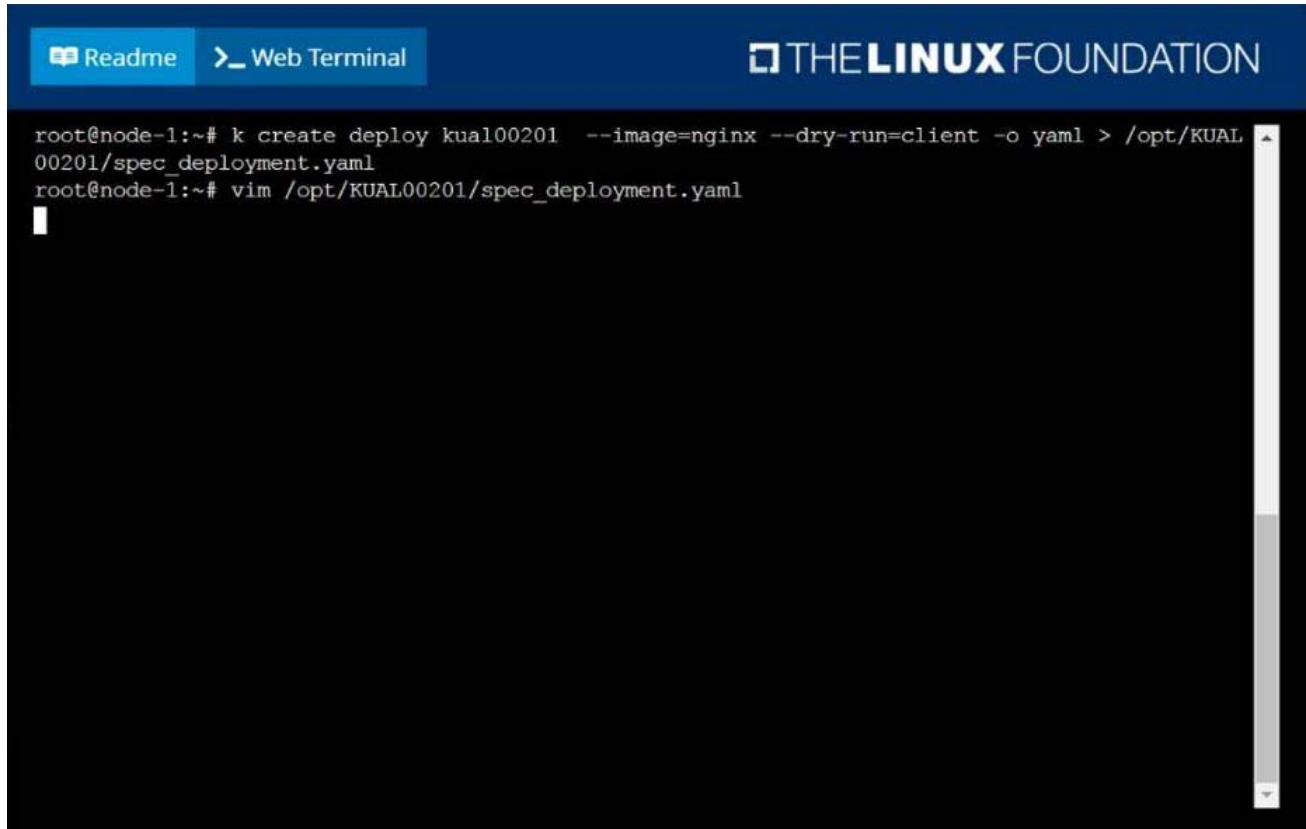

- ☞ Launch 7 replicas of the nginx Image with the labelapp_runtime_stage=dev
- ☞ deployment name: kual00201

Save a copy of this spec file to /opt/KUAL00201/spec_deployment.yaml
(or /opt/KUAL00201/spec_deployment.json).

When you are done, clean up (delete) any new Kubernetes API object that you produced during this task.

Answer:

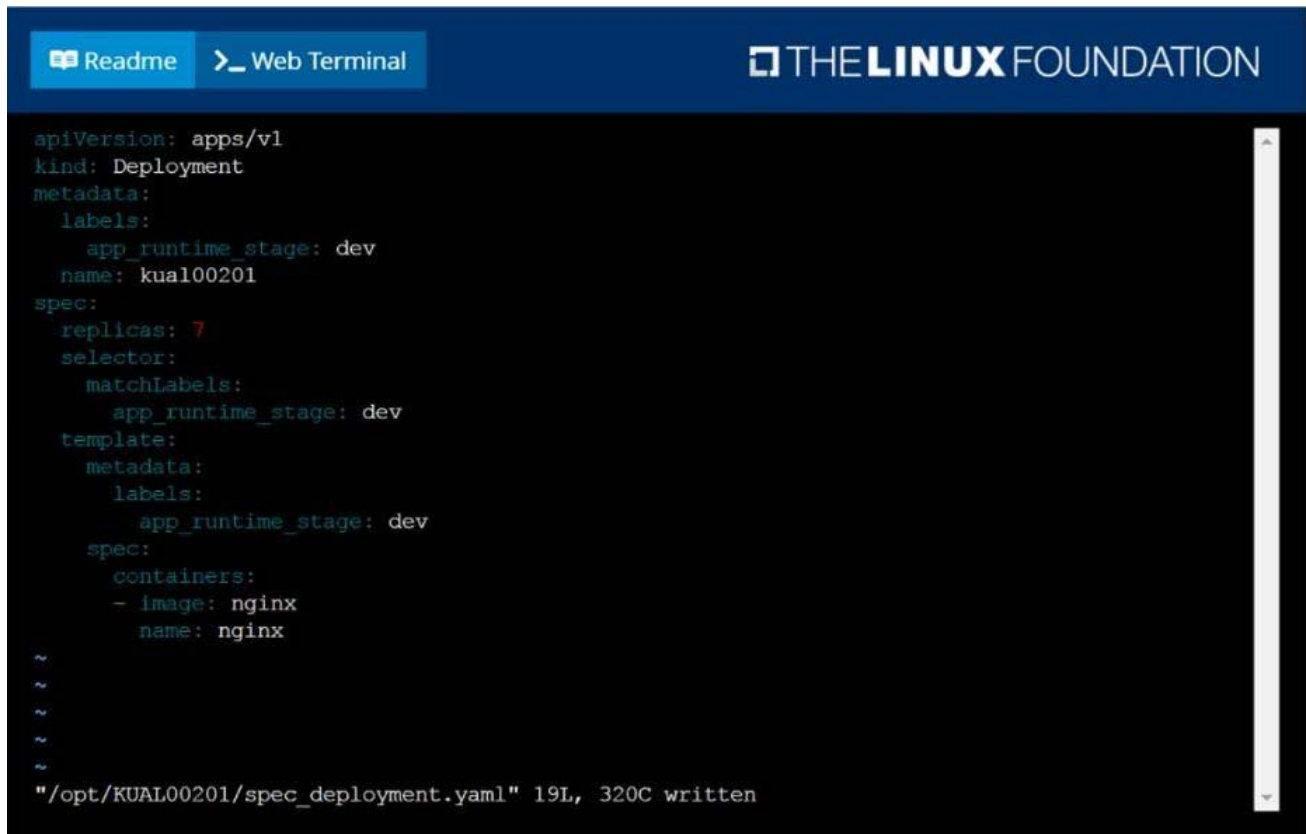

solution

The screenshot shows a web terminal window with a dark blue header. On the left, there are two buttons: 'Readme' and 'Web Terminal'. On the right, the 'THE LINUX FOUNDATION' logo is displayed. The terminal content shows a user at a root prompt on a node-1 machine. They execute the command 'k create deploy kual00201 --image=nginx --dry-run=client -o yaml > /opt/KUAL00201/spec_deployment.yaml'. The output of the command is shown on the next line. Then, they execute 'vim /opt/KUAL00201/spec_deployment.yaml', and the terminal shows the start of a vim editor session with a cursor on the first line.

```
root@node-1:~# k create deploy kual00201 --image=nginx --dry-run=client -o yaml > /opt/KUAL00201/spec_deployment.yaml
root@node-1:~# vim /opt/KUAL00201/spec_deployment.yaml

```

The screenshot shows a web terminal interface with a dark background. At the top, there is a blue header bar with two buttons: 'Readme' and 'Web Terminal'. To the right of the buttons is the 'THE LINUX FOUNDATION' logo. The main area of the terminal displays a Kubernetes deployment YAML file. The file content is as follows:

```
apiVersion: apps/v1
kind: Deployment
metadata:
  labels:
    app_runtime_stage: dev
  name: kual00201
spec:
  replicas: 7
  selector:
    matchLabels:
      app_runtime_stage: dev
  template:
    metadata:
      labels:
        app_runtime_stage: dev
    spec:
      containers:
      - image: nginx
        name: nginx
```

Below the YAML content, there are five tilde (~) characters. At the bottom of the terminal, a status message reads: `"/opt/KUAL00201/spec_deployment.yaml" 19L, 320C written`. A vertical scrollbar is visible on the right side of the terminal window.

3.CORRECT TEXT

From the pod label name=cpu-utilizer, find pods running high CPU workloads and write the name of the pod consuming most CPU to the file /opt/KUTR00102/KUTR00102.txt (which already exists).

Answer:

solution

Readme

_ Web Terminal

THE **LINUX** FOUNDATION

```
root@node-1:~# k top po -l name=cpu-utilizer
NAME                                CPU (cores)  MEMORY (bytes)
cpu-utilizer-98b9se                 60m          7Mi
cpu-utilizer-ab2d3s                 14m          7Mi
cpu-utilizer-kipb9a                 45m          7Mi
root@node-1:~# vim /opt/KUTR00102/KUTR00102.txt
```

The image shows a web terminal interface. At the top, there is a dark blue header bar. On the left side of this bar, there are two buttons: 'Readme' with a book icon and 'Web Terminal' with a terminal icon. On the right side of the header bar is the 'THE LINUX FOUNDATION' logo. The main area of the terminal is black. The first line of text is 'cpu-utilizer-98b9se'. Below this, there are 18 lines of tilde '~' characters. At the bottom left, there is a prompt ': wc' followed by a white cursor. On the right side of the terminal area, there is a vertical scrollbar.

4.CORRECT TEXT

Create a Kubernetes secret as follows:

⇒ Name: super-secret

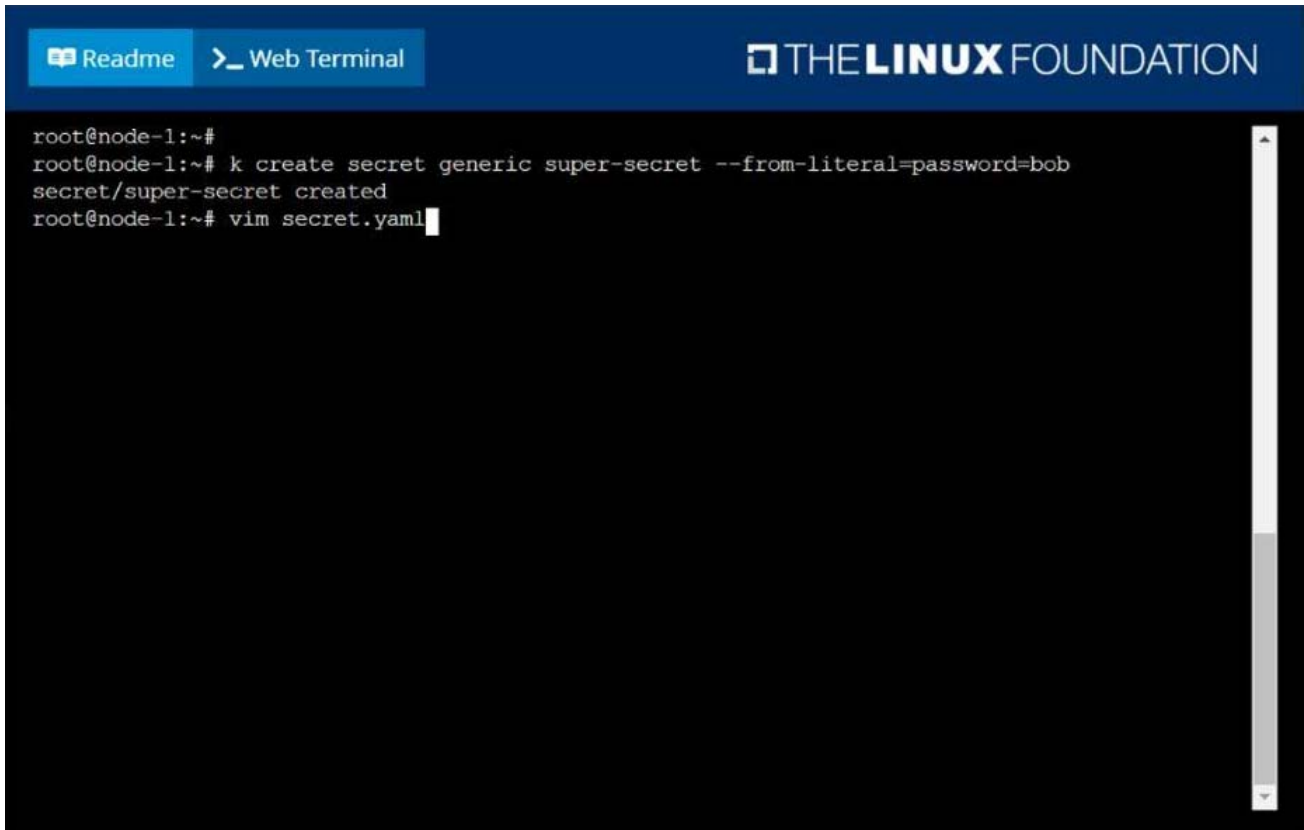

⇒ password: bob

Create a pod named pod-secrets-via-file, using the redis Image, which mounts a secret named super-secret at /secrets.

Create a second pod named pod-secrets-via-env, using the redis Image, which exports password as CONFIDENTIAL

Answer:

solution

```
root@node-1:~#  
root@node-1:~# k create secret generic super-secret --from-literal=password=bob  
secret/super-secret created  
root@node-1:~# vim secret.yaml
```

Readme Web Terminal THE LINUX FOUNDATION

```
