Exam : **D-NWG-DS-00**

Title : Dell Networking Design

Version : DEMO

1.Which of the following should be considered during the planning phase of a Cyber Recovery Vault?
A. Physical distance between production and recovery sites
B. The use of thin provisioning
C. Network switch redundancy
D. VLAN segmentation
Answer: A

2.Which of the following is a key element of Post-Deployment Verification?
A. Configuring VLANs
B. Verifying that the network's performance matches the design specifications
C. Assigning IP addresses
D. Installing network cables
Answer: B

3.What is the main function of CloudIQ in the planning and management of Dell PowerSwitch devices?
A. Provides cloud-based storage for network configurations
B. Enables predictive analytics and performance monitoring
C. Manages firewall rules and security policies
D. Provides licensing for PowerSwitch devices
Answer: B

4.Match the following roles in networking design with their corresponding responsibilities:
Role
Network Architect
Network Administrator
Security Engineer
Systems Engineer
Responsibility
A) Designs the entire network structure
B) Manages day-to-day network operations
C) Implements firewalls and intrusion detection
D) Manages servers and network services
A. Network Architect - A Network Administrator - B Security Engineer - C Systems Engineer - D
B. Network Architect - C Network Administrator - D Security Engineer - A Systems Engineer - B
C. Network Architect - D Network Administrator - B Security Engineer - C Systems Engineer - A
D. Network Architect - A Network Administrator - B Security Engineer - D Systems Engineer - C
Answer: A

5.Which of the following steps should be taken when modifying a network design template for a specific project?
A. Reuse the template from a previous project without changes
B. Customize the template to reflect the unique requirements of the current project
C. Use a generic template without customization
D. Add all devices to a single VLAN

Answer: B
